

SalesGenie AI – AI Sales Assistant & Lead Intelligence Platform

- The platform gathers information from websites, CRM systems, emails, social media, and customer interactions to generate actionable insights.
- It can automatically score leads, recommend the best prospects, personalize email responses, schedule follow-ups, predict customer buying behavior, and provide real-time sales recommendations.

Key Features

- **Lead Identification**
- **Lead Scoring**
- **Customer Profiling**
- **Email & Chat Automation**
- **Sales Forecasting**
- **Meeting Scheduling**
- **CRM Integration**
- **Real-Time Analytics**

Real-Time Example

Scenario

A software company sells cloud-based accounting software to small businesses.

Step 1: Lead Discovery

The AI platform scans business directories, LinkedIn, company websites, and online forms to identify businesses that may need accounting software.

Example Lead

- Company: ABC Traders
- Industry: Retail
- Employees: 60
- Location: Chennai
- Annual Revenue: ₹15 Crore

Step 2: Lead Intelligence

The AI analyzes available information and generates insights:

Parameter	Result
Company Size	Medium
Technology Used	Excel-based accounting
Hiring Activity	Hiring accountants
Website Visits	6 visits in last week
Email Opens	5 out of 6 emails opened

Step 3: AI Lead Score

The platform calculates the probability of conversion.

Factor	Score
Company Fit	25/25
Engagement	30/30
Budget	20/20
Decision Maker Interaction	20/20
Buying Intent	5/5

Final Lead Score = 100/100 (Hot Lead)

Step 4: AI Recommendation

The AI assistant suggests:

- Contact the Finance Manager today.
- Offer a free 14-day product trial.
- Highlight GST compliance and automated invoice generation.
- Schedule a live demo within 24 hours.

Step 5: Automated Personalized Email

Subject: Simplify Your Accounting with AI-Powered Software

Dear Mr. Kumar,

I noticed that your company is expanding and may benefit from a modern accounting solution. Our AI-powered platform helps businesses automate GST filing, invoice generation, and financial reporting.

Would you be available for a 20-minute product demonstration this week?

Best Regards,

Sales Team

Step 6: Sales Outcome

Before AI

Manual lead search

Generic emails

Equal attention to all leads

Low conversion rate

Time-consuming follow-ups

After AI

AI automatically identifies leads

Personalized emails

Priority given to high-value leads

Higher conversion rate

Automated reminders and follow-ups

Benefits

- Increases sales productivity.
- Improves lead conversion rates.
- Reduces manual work for sales teams.
- Provides data-driven decision-making.
- Enhances customer engagement through personalized communication.
- Predicts customer buying intent more accurately.
- Saves time by automating repetitive sales tasks.

Real-World Examples

Many organizations use AI-powered sales and lead intelligence platforms, including:

- **Salesforce Einstein AI**
- **HubSpot AI**
- **Zoho Zia**
- **Microsoft Dynamics 365 Sales**

Lead Management & Prospect Database - Module 1

- Create and manage prospect and customer records.
- Store company profiles, contact details, and engagement history.
- Track lead lifecycle and sales stages.

Step 1: Lead Registration

A new lead enters the system through various sources such as:

- Company website contact form
- Social media advertisements
- Email campaigns
- LinkedIn
- Trade shows or exhibitions
- Sales representative manual entry

Example

Field

Lead ID

Company Name

Contact Person

Email

Phone

Industry

Source

Value

L001

ABC Traders

Rahul Kumar

rahul@abctraders.com

+91-9876543210

Retail

Website

Output: A new lead record is created in the prospect database.

Step 2: Company Profile Creation

The AI platform stores detailed company information.

Information Stored

- Company name
- Industry
- Business size
- Annual revenue
- Location
- Number of employees
- Website
- Products/Services

Example

Company

Industry

Employees

Revenue

City

Website

ABC Traders

Retail

60

15 Crore

Chennai

www.abctraders.com

Output: Complete company profile available for future analysis.

Step 3: Contact Management

The platform records all important contacts within the company.

Example

Name	Phone	Position	Email
Rahul Kumar	+91-9876543210	Finance Manager	rahul@abctraders.com
Priya Sharma	priya@abctraders.com	IT Manager	+91-9876543200

Output: Multiple contacts can be linked to one company.

Step 4: Engagement History

Every customer interaction is automatically stored.

Activities Recorded

- Phone calls
- Emails sent
- Emails opened
- Website visits
- Product demo requests
- Meetings
- Chatbot conversations

Example

Date	Activity	Status
10 June	Website Visit	Completed
11 June	Email Sent	Delivered
12 June	Email Opened	Yes
13 June	Product Demo	Completed
14 June	Follow-up Call	Pending

Output: Complete interaction history is maintained.

Step 5: AI Lead Analysis

The AI engine analyzes customer behavior using collected data.

AI Checks

- Number of website visits
- Email open rate
- Product pages viewed
- Demo requests
- Previous purchases
- Industry match
- Company size

Example

Parameter	Result
Website Visits	8
Email Opens	6
Demo Request	Yes
Buying Intent	High

Output: AI identifies highly interested prospects.

Step 6: Lead Scoring

The AI assigns a score based on the likelihood of conversion.

Example Formula

Lead Score =

- Company Fit = 30
- Customer Engagement = 30
- Budget = 20
- Decision Maker Activity = 10
- Buying Intent = 10

Total Score = 100

Classification

Score	Category
81–100	Hot Lead
61–80	Warm Lead
41–60	Cold Lead
0–40	Low Priority

Output: Sales team focuses first on Hot Leads.

Example

Lead ID

L001

Current Stage

Product Demo

Step 7: Sales Stage Tracking

Each lead moves through predefined sales stages.

Decision Maker

Project Structure

AI_Sales_Intelligence/

Step 1: Install Required Packages

```
pip install flask
```

Step 2: Create Database (database.py)

```
import sqlite3
conn = sqlite3.connect("sales.db")
cursor = conn.cursor()
cursor.execute("""
CREATE TABLE IF NOT EXISTS leads(
id INTEGER PRIMARY KEY AUTOINCREMENT,
company TEXT,
contact TEXT,
designation TEXT,
industry TEXT,
employees TEXT,
revenue TEXT,
location TEXT,
funding TEXT,
technology TEXT,
score INTEGER
)
""")
conn.commit()
conn.close()
print("Database Created Successfully")
```

Run:

- `python database.py`

Step 3: Flask Backend (app.py)

```
from flask import Flask, render_template, request,
    redirect
import sqlite3

app = Flask(__name__)

DATABASE = "sales.db"

def get_db():
    conn = sqlite3.connect(DATABASE)
    conn.row_factory = sqlite3.Row
    return conn
```

```
@app.route("/")
def home():

    conn = get_db()

    leads = conn.execute("SELECT * FROM leads").fetchall()

    selected = None

    if len(leads) > 0:
        selected = leads[0]

    conn.close()

    return render_template("index.html",
        leads=leads,
        selected=selected)
```

```
@app.route("/add", methods=["GET", "POST"])
def add():
```

```
    if request.method == "POST":
```

```
        conn = get_db()
```

```
        conn.execute("""
```

```
INSERT INTO leads
```

```
(company,contact,designation,industry,
employees,revenue,location,funding,
technology,score)
```

```
VALUES(?,?,?,?,?,?,?,?,?,?)
```

```
""",
```

(

```
request.form["company"],  
request.form["contact"],  
request.form["designation"],  
request.form["industry"],  
request.form["employees"],  
request.form["revenue"],  
request.form["location"],  
request.form["funding"],  
request.form["technology"],  
request.form["score"]
```

))

```
conn.commit()  
conn.close()  
return redirect("/")  
return render_template("add_lead.html")
```

```
if __name__ == "__main__":  
    app.run(debug=True)
```

Step 4: Add Lead Page (templates/add_lead.html)

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title>Add Lead</title>
```

```
</head>
```

```
<body>
```

```
<h2>Add New Lead</h2>
```

```
<form method="POST">
```

Company

```
<input type="text" name="company"><br><br>
```
